SAFEVAC LIFTING SYSTEMS

SAFEVAC™ LIFTING SYSTEM AN AUSTRALIAN FIRST

Introducing the SafeVac™ SV400, the pinnacle of vacuum lifting technology. Designed and manufactured in Australia with cutting-edge engineering and advanced features, the SV400 is the ultimate solution for efficient and safe pipe material handling.

- **Australian designed and manufactured** by Austrack Equipment's inhouse team.
- **Exceeds Australian Standards -** Meets the latest European specs for safety and performance (EN13155) and exceeds current Australian Standard AS4991.
- **Improved lifting capacity and visibility** by removing tank and pump unit from work tool end to back of excavator also provides additional counterweight compared with conventional vacuum lifters.
- **Large in-cabin control screen -** To improve operator control, overall system safety, and provide extensive data logging capability the large display screen shows reserve tank pressure, vacuum shoe pressures, pitch and roll angle of spreader bar/vac shoes, pump RPM & latch/release control icons.
- **Large Hi torque rotator** with adjustable needle valves for enhanced operator control.
- **Timed sequence dual action buttons for pipe latch and release** built into excavator joysticks resulting in productivity, reduced operator fatigue and safety gains.
- **Vacuum latch/release valve** situated at shoe in single shoe format or at spreader bar in multi shoe format means instantaneous vacuum latch and release upon operator command increasing, flexibility, productivity, safety, adaptability.
- **Over rotation warning** to prevent pipe or spreader beam contacting the excavator.
